

What is SlimBiome® ?

Transforming the way weight loss is traditionally approached, SlimBiome® from OptiBiotix Health Plc offers a healthy, hunger-free weight management system that is backed by strong scientific principles rather than simply relying on willpower.

How does it work?

Using OptiBiotix's unique microbiome modulation science, as well as patented formulation of natural ingredients identified and developed by leading specialists in metabolism and nutrition, SlimBiome® takes the toil out of managing weight. It has been demonstrated to help reduce body weight while accelerating and aiding the sustainability of weight loss.

As well as maintaining blood sugar levels, which helps to lessen food cravings, SlimBiome® induces a lower blood glucose rise after meals compared to sugar-containing food and drinks.

Stimulating the growth of health positive bacteria in the digestive tract to affect regulation of appetite, SlimBiome®'s blend of prebiotics and dietary fibres helps to create a longer-lasting feeling of fullness, while the trace mineral content enhances the body's use of insulin, helping to metabolise carbohydrate and fat.

SlimBiome® promotes the feeling of fullness, helps burn calories by promoting a healthy metabolism and maintains blood sugar levels to prevent overeating. It has been shown to reduce calorie intake by up to 20% and lower food cravings.

-  *Compounds proven to help in the reduction of body weight in the context of an energy-restricted diet*
-  *Promotes the feeling of fullness resulting in less food intake*
-  *Maintains blood sugar levels to reduce cravings and snacking*
-  *Maintains gut microbiome diversity which has been associated with improved weight loss*

Consumer studies show an average weight loss of 2-3lbs per week and reduced calorie intake of >20% with lower levels of cravings.

SlimBiome® Application

Designed for wide-ranging use as a functional ingredient in snack bars and meal replacement shakes, as well as in dairy and bakery products, SlimBiome® is heat stable in processing, low cost, has no distinguishable taste and can be easily added during manufacture.
